

köld-Draw™ Draft System

As an industry leader in cold plate technology, we brought our expertise in 360-degree cooling using embedded glycol, guaranteed to get your drink as cold as you intended. By allowing cold glycol to flow freely through the modular cooling blocks, it creates thermal efficiency which compliments our glycol chiller and delivers lower cycle rates. Our system also features a leak-proof double O-ring shank design and full 304 stainless steel beverage lines for increased hygiene, purity, and durability.

Flexibility to dispense beer, cocktails, wine, coffee, kombucha and tea in one draft system with the most energy-efficient BTU loss in the industry.
